Instructor:

Abu Noman Basar

Software Engineer (Python), eAppair Ltd
Django Instructor at aiQuest Intelligence

❑ `git init`

- Initializes a new Git repository in the current directory.

❑ `git add .`

- Stages all changes (new files, modified files) in the current directory for the next commit.

❑ `git commit -m "first commit"`

- Creates a commit with the staged changes and adds a message (ex: "first") describing the commit.

❑ `git status`

- Shows the current status of the repository. It lists files that have been modified, added, or staged but not yet committed.

❑ `git remote add origin https://`

- Links the local repository to a remote repository (e.g., on GitHub or GitLab) by providing its URL.

❏ git log

- Displays a log of all commits made to the repository.
